

Icecat JSON and XML schema update: image size attributes deprecated June 1, 2021

As we update per June 1, 2021, the set of attributes in our [Icecat](#) product [XML](#) and [JSON](#) schemas, we would like to inform you of the following:

- The set of attributes that describes the size of images will not be further maintained and will not be populated with data.
- For XSD/DTD compatibility reasons these attributes will remain in the XML and JSON until further notice and will be populated with “0” values for new product images.
- The set of affected attributes is:
 - OriginalSize;
 - Pic500x500Size;
 - Size;
 - LowSize;
 - ThumbSize;

Example:

```
<Name ID="6876186" langid="64" Value="Sustainability certificates"/>
<Name ID="6876188" langid="66" Value="Sustainability certificates"/>
<Name ID="7216500" langid="71" Value="Sustainability certificates"/>
<Name ID="7347615" langid="72" Value="Sustainability certificates"/>
</Feature>
</ProductFeature>

Impact Icecat JSON and XML update

What should you do? If your applications depends on the above-mentioned attributes:

- Please, make sure you do the images file size calculation yourself in your application before June 1,

2021.

If your applications does NOT depends on these image size attributes:

- There is nothing you have to do.

In case of questions about this update, please respond to this post below. We'll folowup on this.
